Vielight Neuro®

For Neurological Conditions

What is Photobiomodulation?

Photobiomodulation uses near-infrared light, or low level light, to deeply penetrate brain tissue.

The technique energises mitochondria in the brain cells to cause a cascade of beneficial effects.

This includes increase blood flow to the targeted tissue, reduced inflammation, and tissue repair and growth.

Benefits of Photobiomodulation

Clinical trials using photobiomodulation technology have suggested improvements in many neurological conditions:

- **Parkinson's disease**
 - improved cognitive function
 - reduced speech difficulty
 - improved gait
- **Dementia**
 - improved cognition
 - improved sleep
 - less anxiety and wandering
- **Anxiety and Depression**
- **Stroke**
- **Traumatic Brain Injury**

About Us

All Round Health and Community Care aims to provide comprehensive healthcare, delivered by our General Practitioners, Nurse Practitioners, and a range of Allied Health Professionals.

We strive to provide all-rounded, affordable and quality care, to enhance the overall wellbeing of our clients.

Therefore, we are determined to work with our clients, as well as their General Practitioners and any other healthcare providers involved in their care, to improve physical, mental and emotional health.
